Microsoft Windows 8.1 Enterprise 6.3.9600.17031.WINBLUE X86-X64 64 Bit

i'm trying to install the cs 2011 but it's not working. it stopped working after updating windows. i tried the suggested fixes and still i can't get it to install. i tried the wim restore, bootable usb. same results. my wim file is an iso file. i also tried this: http://whls.org/forums/topic.php?id=499 i have a bit of a problem. when i tried to do a system restore, it fails saying its a "validation issue". i did all you guys instructions, and get that it says validation issues. i've run out of tricks. i tried a windows recovery disc, and it seems to fix it, but when it reboots, all it says is "windows is starting up". i tried looking for your post again, and was going to try the advice from this post. but when i did it, i had to reboot, and the screen went black (i had to use my computer monitor to figure out it was crashed). i then had to do the security troubleshooting to get it back up. but when i went to the start menu, it didn't work. as soon as i started clicking around, it started showing the windows desktop. it seems that when you use this method, you're not able to change the default admin password. i had to manually change it to one that i knew wasn't enabled/used on our computers. it didn't appear to do anything different, but i was able to log into the operating system. i'm having a similar problem as you're having. i ran dism.msi and it created the image without a problem. when i go to step 13 it looks like it's doing something but it just stops after "the cd drive that is on this computer is not accessible. could you go to start (or whatever it's called) and put your thumb drive into the slot in the bottom left of your computer and try again."

Microsoft Windows 8.1 Enterprise 6.3.9600.17031.WINBLUE X86-X64 64 Bit

i'm on windows 8.1 pro 64 bit. i did exactly as you instructed, then right before i hit [url= edwinpe_x86-x64 [url= back up the movies disk [/url] to a usb. the following things were on the usb when i was prompted to restart: drivernodisplay.wim, windows8.1-kb2999226-x64_nonpatch.wim, driver_detect.exe, and softwareoem-

win8-win7-sp2.wim. after the reboot, my computer wouldn't recognize the usb or my dvd drive. i tried to use the usb on my other computer, but it wouldn't work. i tried to boot from the dvd drive on my other computer, but it wouldn't work. why is my computer telling me that i don't have a dvd drive, when i know i have one? how do i fix this? i'm getting ready to reinstall windows, but i'm not sure what to do if this is a hardware issue. it is a good idea to have a separate hardware firewall/anti-malware application on the machine you are installing on. it does not matter whether it is a pc or a laptop. in any case, it is always a good idea to ensure the working firewall/anti-malware is on. in order to use the windows 8.1 setup, you have to make sure that winpe is running. there is a virtual machine called winpe in a package called vs2wpe-x64-6.3.9600.17031.winpe-gdr.exe. you can add this to an image and then install the image as a windows 8.1 image. this is a modified image of the windows 8. when you select the bootable media and optical disk option, make sure you select winpe, not winpe (windows pe) or any other version. the winpe version has been reorganized to include a windows firewall module. when you select the bootable media and optical disk option, make sure you select winpe, not winpe (windows pe) or any other version. the winpe version has been reorganized to include a windows firewall module. 5ec8ef588b
