The first thing you will want to do is to launch the software. A welcome screen will open up, letting you know that the program is ready to be used. You will be prompted to choose between modes and actions for the primary and secondary monitors. Actual Multiple Monitors uses a tabbed interface. The title bar contains the name of the currently active window. If there is a minimized window, its name is displayed. The buttons at the left side of the screen are used to move between the tabs and when a tab is selected, the program runs in that tabbed environment. Actual Multiple Monitors has a notification area in the top right corner of the screen where all the recent notifications are displayed. In order to access the menu and control the program, the user has to use the mouse. Actual Multiple Monitors is a small and easy-to-use tool for multiple monitor setups. The application can act as a background application as well as a standalone program. Actual Multiple Monitors uses a tabbed interface. The title bar contains the name of the currently active window. If there is a minimized window, its name is displayed. The buttons at the left side of the screen are used to move between the tabs and when a tab is selected, the program runs in that tabbed environment. Actual Multiple Monitors has a notification area in the top right corner
