Running Lightroom Running Lightroom involves executing it in either a "standalone" or "browser" mode. The standalone mode is the traditional method of running Lightroom. In this mode, Lightroom runs directly from the application file. The browser mode is different in that it runs from a web browser and therefore requires Internet access. ## Standalone Mode Running Lightroom in the standalone mode involves running it directly from its application file. In this mode, the program runs in its own window and can be run on either a Mac or PC, in either a 16:9 or 4:3 aspect ratio (Figure 13-1). In the bottom of the application window are two buttons to choose which function to use. The options are to enter Develop mode, import photos, convert, share

Why is Photoshop so popular? To discover the reasons why Photoshop is so successful, we have to remember that digital cameras and smartphones have become ubiquitous. People take lots of photos and share them online. They use Photoshop to edit those photos. Sending photos to other people through Facebook, Twitter, email or sending them as direct messages in WhatsApp or Instagram is a daily activity for them. Sending people a picture is a sign of appreciation, friendship, or a greeting, a sign of love or friendship and a sign of empathy. It is also a way to share and connect with other people, both in the virtual and physical world. This has created an unprecedented demand for digital graphics: people look for easy ways to modify photos and graphic images and share them online through social media. Thus, the great majority of Photoshop users are freelancers and small companies who have limited budgets to pay for professional services and the complexity of Photoshop. They are not interested in learning more because it is complex and too expensive for them. But Photoshop was designed and developed at Adobe to be the most widely used professional image-editing software in the world. The very first Photoshop introduction video declared: "Photoshop is good because it is the most widely used image-editing program. It can be used by professional photographers, graphic designers, web designers, and a variety of people." The number of users of Adobe Photoshop is almost three times the number of Microsoft Paint users. Now, Photoshop is a desktop program that needs to be installed on a PC or Mac computer. It was designed to be run on Windows, Mac, and Linux. Since September 2019, Photoshop is only available as a subscription-based product called Adobe Creative Cloud. This cloud-based software allows you to use Photoshop on any device. However, the price of the subscription is expensive. Adobe Photoshop starts at \$1,389 US and can go up to \$4,940 US per year (the prices vary depending on the country you live in). For a single image, a small company or a hobbyist, it is not a good option for these prices. In addition, Photoshop needs to be updated regularly, especially to fix security bugs and improve the software's performance. You have to pay for it again when a new version is released. This can be a real burden for small businesses and hobbyists. Free alternatives A free Photoshop alternative is Gimp, a free graphics software a681f4349e

Prevention of radiation-induced weight loss with liver. Effect of in vivo treatment of mice with gossypol for 7 days before and after whole body irradiation on blood and tissue hypothyroidism and on the loss of body weight was investigated. A significant decrease in the weight loss and restoration of the organ-body weight ratio was observed in the gossypol-treated animals (p 1. To assess inter-rater concordance and reliability for the modified Disability Rating Scale (mDRS). The mDRS is a psychometric instrument designed to capture four domains of disability in spinal cord injury (SCI) patients: mental status, emotional status, bowel and bladder function, and functional status. An expert panel nominated four raters and, in turn, these raters nominated two raters for each domain. Complete inter-rater correlation matrices were computed, and inter-rater concordance was evaluated using Kendall's coefficient of concordance (W). In addition, 50% and 80% consistency was evaluated for each rater pair and for the total rater panel. The concordance between expert raters and their nominated raters ranged from 0.42 to 0.83 for the four domains. Concordance between experts and their nominated raters for all four domains ranged from 0.61 to 0.83, and with their nominees for the two-rater panel from 0.58 to 0.94. Differences in concordance based on level of expertise within the panel were found for the emotional status domain. Based on the 50% concordance criterion, the
