Mingyi24 Lack of the “Clear the start menu” option was my main complain for this app. Since I don’t like programs that create other menus, I am glad that the “Clear the start menu” feature is now available. KEYMACRO is an open-source tool for Windows, it is not an app, but a full-fledged add-on for your web browser that enables you to control your keyboard using the Internet. There are other add-ons for the browser that claim to do the same, but KEYMACRO is the one that adds a special GUI window to the browser itself. This means that it is much more convenient and intuitive to use than the standalone apps that require you to use your keyboard and then switch to the browser. KEYMACRO Description: KEYMACRO is an open-source tool for Windows, it is not an app, but a full-fledged add-on for your web browser that enables you to control your keyboard using the Internet. There are other add-ons for the browser that claim to do the same, but KEYMACRO is the one that adds a special GUI window to the browser itself. This means that it is much more convenient and intuitive to use than the standalone apps that require you to use your keyboard and then switch to the browser. KEYMACRO lets you define your own shortcuts, and you can assign any function to any key, as you wish, including keyboard locking. For example, you can lock the keyboard so that you can create, edit and preview your documents on the web browser without having to worry about the keys. Also, you can protect the files that you are uploading with a password, as you prefer. And for those of you that like to watch a movie while creating, you can lock the computer so that you do not accidentally mess up your work. Main features The main idea behind the application is to offer you complete control over your keyboard. As you can see, it is not as easy to assign a function to a single key, but KEYMACRO enables you to do it easily by using the shortcuts. For instance, you can define the CTRL key to control the brightness on your screen, the Super key to turn your screen on and off, the Windows key to lock the screen, the PageUp key to go up to the navigation bar, and so forth. Also, you can use the window for all programs and control them as you wish. For instance, you can define the DELETE key to close the tab you are currently viewing, the F5 key to reload the page, the PAGEUP key to go back to the previous page, the HOME key to go to the start page, the META key to get the text on the page 1d6a3396d6
