This is a program that can be used to set unique macros to the keyboard of a PC. By using this software, the user can create macros on the keyboard or set new macros for keys. If you create new macros, you can assign functions

such as Print Screen, Cut, Paste, Copy, Paste Special or Print Screen. Also, you can create other types of macros such as system or file macros, mouse macros, keyboard macros, keyboard shortcut macros and hotkey macros. The special function of Hotkey is to map an extra key to an existing key or shortcut, as opposed to a macro. Hotkeys can be assigned to work with the keyboard keys or button. You can assign hotkeys on the "Normal" or "Alt" version of the keyboard to operate a particular program or the operating system. Additionally, you can use different functions when assigning different hotkeys. You can

also use the standard keyboard keys that have been mapped to function on the keyboard as hotkeys. These include Control, Alt, Shift, Scroll Lock and a variety of keys. System macros can be used to operate system tools or the operating system's basic functions such as launching an application or the task manager. The operating system and application's task manager can be run at the same time. The following functions can be set as system macros: Startup, Exit, Task Manager, Task Manager, Command Prompt, Command Prompt, Command Prompt, Command Prompt, and Desktop. You can also create a shortcut on the

desktop, launch applications, enable Windows Media Player, print and copy items. The user can also open several programs, starting with Windows Explorer. When the key is pressed, the program is activated. You can use a key for more than one function. You can also perform more than one function on the same key. Sneak peak: The main functionality of the program is to create macros for your PC. You can set macros on your keyboard and assign functions such as Print Screen, Copy, Paste and Paste Special. A variety of types of keyboard shortcuts can be set. You can also use hotkeys to assign an extra key to the normal

version of the keyboard. When you add more hotkeys, you can use the Shift or Ctrl keys to alternate between the new and old hotkeys. This means that you can perform different functions while still using the same key. For example, you can use the same key to activate different functions, such as a key for launching the file manager and one for launching Windows Explorer.
