When you need to have your video card working at its best and you're willing to part with your money, Nvidia Optimus offers an interesting but tricky option for you to enjoy. Nowadays most laptops have this technology on board, offering the ability to switch between a dedicated graphics card and an integrated one depending on the current need. For most people, that works perfectly well, but for someone that goes for the priciest of Nvidia's products, the hybrid solution can become cumbersome. Almost all screens support some kind of touch function. This could consist of a mouse or a touchpad, usually one or the other. What the touch screen does not support is multitouch though, and that's where the advantage of a touch-enabled screen comes in handy. One such option is the Samsung GS Touch, which comes with a couple of useful features, but will have to work with a few limitations if you want to make use of them. Advantages of a multi-touch screen The screen itself is, as you would expect, perfectly touch-compatible. There's no problem getting started, but it doesn't come without drawbacks either. You do not always have to touch the screen, but on the contrary, you might have to tap it a couple of times or get close to it. While that's not a big problem in principle, you might find it frustrating, particularly as there are controls that are clearly meant for touch actions. As a result, you'll have to disable some of the screen's touch capabilities, in order to make things work more smoothly. This, however, might not be the best of ideas, as the chance of this happening is very high. Additionally, the screen shows no indication of what's currently happening

SUMMARY: CPUload is a free application that focuses on showing how your CPU is being used by applications. PROS: Free. Takes CPU load into account. CONS: Graph creation is time-consuming. SEX TRIVIA: The CPUload executable is called Cpu_Idle.exe, and it's free to download and use. SUITABLE FOR: Uses it on Windows XP and above. BUY THE APPLICATION AS A PAID OFFER License Features: Create a graph of CPU load history. Update the CPU load graph in real-time. CPUload top software for running multiple applications CPUload is the best software tool for managing your applications' CPU load, although it's not the fastest. The simple and intuitive interface allows you to manage everything with no hassle. It has been designed to load CPU speed and provide a real-time graph of CPU usage. It has minimal interference and offers instant access to graph updates. Advantages of a portable app The software is designed to work with any Windows system. It is quite easy to install and doesn't require a lot of maintenance. The program isn't known to have any sort of compatibility issues. It runs smoothly, with none of the regular system bottlenecks. The CPUload application is a great tool for monitoring CPU usage and managing it better. You get all the details that you need for better view of your system usage, including graphs, and stats on running processes. It's an ideal way to keep track of your system's performance and ensure that it doesn't bog down. Builds a real-time CPU load graph When you launch the program, you get a basic view on screen showing a CPU load graph on the lower right corner of the window. All the main details of CPU usage are displayed in this window, which is handy if you want to get an overview of the system's performance and resources at any given moment. This window stays on top of everything else, so it's easy to keep up with all the process running at any given time. All the key statistics of your system are displayed on this, along with details on any specific process. A button toggles between the application's active and inactive states, where

- Uses the idle process to record CPU usage. - Displays graph in real-time. - Has no options to adjust the graph size or invert the graph. - No option to save graph to a log file. Wix v3.12 Beta (Wix.org) Wix is a free website building tool that makes it easier to create and manage your own website. It includes a Site Builder that lets you drag and drop content to build your site without typing any HTML code. You can also create professional-looking Flash sites, keep customers up to date with email newsletters, sell products, use free templates, and do much more. Wix allows anyone to create and manage a website quickly and easily. Advantages of a website builder Wix is a simple tool. There are no complex options, and you don't need any special skills to make a website. A great benefit is that you don't need to know HTML code or understand what tags need to be created to create a website. You build with it a website using different widgets and content, and the resulting code is shown on screen in a visually intuitive interface. This can be tricky if you just want to create a static page with a few paragraphs of text, but you can use any template to create a lively website with interesting content. With templates for blogs, e-commerce, blogs with forums and more, you are bound to find a suitable template for every type of website you want to build, and you can use the same build process to quickly create multiple sites. Builds a website in different ways The tool is divided in a content and drag-and-drop section. The content section gives you the ability to add a site map, content pages and so on, and it has additional tools to make the process even easier. The drag-and-drop section contains content editors and layout tools to build a site's content. There are almost 2,000 widgets and content editors, and you can combine as many as you want to create a site. Additionally, the drag-and-drop section includes tools to insert image galleries, shopping carts and a variety of text boxes. Best of all With Wix you can use free and paid templates to create your own website. You can even create private websites that require no fee. A potential drawback is that the interface is basic at best, so the site is not visually appealing or easy to navigate.
