Adobe Illustrator: See the "Adobe Illustrator" article later in this chapter. Adobe Photoshop CS 6 to Photoshop CC 2017: The difference here is not a fundamental shift in how Photoshop works, but how you can work with your images. With Photoshop, you can edit a single image and then save it. In previous versions of Photoshop, you had to edit a file for each edit. * * * # Introducing document-based workflow Photoshop has long been associated with document-based workflow because it enables you to create documents and add layers to make changes to your work, as seen in Figures 3-7

and 3-8. It's less common these days because the trend is moving toward working in a file. This is not necessarily a bad thing. Photoshop does recognize layer-based files, which is one way you can work. The other way is to work in a file and then save the image as a file-based image. This is not to say that you should never create a document-based file in Photoshop, just that you can use layers and place them where you want as well. You can also create a new image or manipulate an existing one in Photoshop. After that, you can save the image as a file-based image. The following sections describe this process in more detail. ****Figure 3-7:**** Adding a new layer, and then editing it as a completely separate layer. ****Figure 3-8:**** Adding the same layer over and over again.

Using Photoshop as a Document-Based Tool Photoshop is really designed for creating documents, and you have the option of making a new document for each edit or using layers to save a project for future use. You can still be able to work on a single file, but you'll get different results. See

Figure 3-9. If you create a document for each edit, each time you make a change, you open a new document. This saves the file but also consumes memory and uses more disk space. If you have a large document with a lot of layers, you're better off creating a new document than using the same file repeatedly. However, you can still open an existing document if you want. And if you've been using a single file, you may want to use a document-based workflow. To create a new document, follow these steps: 1. **

This tutorial shows you a step-by-step way how to edit the face of one person in a picture, or simply flip the head, if your image has a flipped head. The process is the same for photos with only one person in the picture, or even photos with several people. If you want to learn how to bring attention to someone's eye, face or whole body in Photoshop, this

Photoshop tutorial is for you. Step 1. Create a new, blank canvas Open a new image file in Photoshop. For this tutorial we use a picture of a boy on a beach. Step 2. Select the boy's face First select the boy in the picture with the Shift and click the right mouse button on him. Add the selection with the lasso tool. Step 3. Delete the selection of the boy's clothes Lasso the clothes with the L and drag it to the trash. Step 4. Find the face with the Magic Wand Add the magic wand by pressing Shift+W. In this tutorial we want to select the boy's face. Step 5. Delete the remainder of the boy's face Drag the face selection to the trash. Step 6. Merge the face selection with the background Select everything with A and press Ctrl+K. The boy's face should now be separated from the rest of the background. Step 7. Flatten the canvas by pressing Ctrl+Alt+Shift+E To flatten all contents (including the layer mask and any adjustment layer applied) press Ctrl+Alt+Shift+E Step 8. Adjust the selection Open the layer mask by pressing Ctrl+Alt+L. Adjust the selection using the

brush or mask of the layer mask. Step 9. Delete the layer mask Delete the layer mask by pressing Ctrl+Backspace Step 10. Add an adjustment layer and change the brightness and contrast Open an adjustment layer in the layer stack (Ctrl+Shift+N). Make the adjustment using the arrows on the adjustment layer (not the Brightness/Contrast panel). Step 11. Duplicate the adjustment layer Duplicate the layer by pressing Ctrl+J. Change the duplicate layer to “Overlay” in the layer mask. Step 12. Change the layer 05a79cecff
