With the goal of making the fantasy RPG experience come to life, we are working to fully realize the design of an online RPG, while still retaining the unique charm of the Lands Between. [Ornate Art] [Artwork]Classification of the annual proliferation cycles of human oral squamous cell carcinoma. The classification of the annual proliferation cycles of oral squamous cell carcinoma (OSCC) was based on the number of cells in the three stages of mitosis. The total number of cells per tumor section was divided by the number of cells in mitosis to obtain the mitotic index (MI), which was used as the denominator of the annual proliferation cycle percentage. Initially, the mitotic index of the oral epithelia from 78 nontumorous, premalignant, and malignant specimens was determined. The MIs for the oral epithelia had bimodal distribution patterns, showing a gap between the low- (MI range, 0%-25%) and high-MI (range, 25%-100%) groups, which was proven statistically significant ($P = .025$). However, the low-MI group included both normal and dysplastic oral epithelia and it overlapped with the high-MI group. The MI of the OSCC in comparison with the other carcinomas was significantly lower (P Tiny-mites' big bucks -- and their damages Weeds and marsupials gobble up Asian forest birds' favorite foods, study shows The Procyonidae family, which includes raccoons, are the primary, nocturnal predators of the small, nocturnal, rainforest birds.
