RollerCoaster Tycoon World is the newest in the renowned RollerCoaster Tycoon franchise, and is poised to once again set the standard for the best theme park management simulation game. The world has changed, and so has the game. Ever since the gold rush-fueled Western theme park craze of the 1880's, theme parks have become an integral part of our lives. We show up at the park, spend the day riding our favorite coasters, go home, eat our favorite food, watch our favorite TV shows, and then we fall asleep on the sofa thinking about how great our day was. Coaster fanatics and others can't get enough of seeing what rides others have built in their parks, as well as pictures of the most imaginative and creative coasters in existence. Throughout the 20th century, theme parks have flourished and evolved into the huge sprawling mega-parks that we all know today. Theme parks cover all the basics from rides to food to games and even hotels! RCTW is the first game to include most of these standard elements. However, one of the most recent innovations is customizing your park's theme with the revamped coaster editor, allowing you to build custom themed coasters unlike any in the franchise's history. With a full freeform object placement tool and path selections like never before, you can now create the most awe-inspiring, craziest, and most elaborate coasters in existence! We've also redefined the criteria for the game itself. Tracks that have been created in previous games may have to be completely redone, due to advances in game engine technology. With the release of RCTW we've also implemented a new level of realism that makes the game more immersive and fun. Environment elements like terrain and water may be deformed and move to accommodate the ride layout, and all rides are simulated with realistic weight and friction, ensuring that each coaster you place will stay on its tracks. Water features are also much more realistic and provide a realistic current that may impact your parks guests! Weather has also been upgraded to include consistent sun, rain, snow, and wind directions and

distances. The game's advanced, re-designed and highly realistic physics engine allows for a realistic riding experience. Details like deformed terrain and accurate rider movement come together to create one of the most immersive and realistic theme park simulation experiences you can find. In addition, we've completely re-designed the coasters themselves. There

It's the best simulation game I've ever played, from the campaign missions to the sandbox mode. The game is so full of complex physics and strategy that it's easy to spend hours in front of the game just building and figuring out what to do next. The gameplay is not new, the good old Theme Park simulator from RCT3 is back, and, like the original, it's so deep and fun that you don't want to leave it anytime soon. Add the fact that everything has been improved, and it's simply irresistible. Now, it's the perfect time to get this game, since the new campaign missions will grant you with a lot of challenges and fun for your park, like starting it from scratch, and this version d41b202975
