research!Q: How to deploy

Cocos2d-X project on our desktop?

Is it possible to build a Cocos2d-X

project on our desktops, i.e. is

there a way to build directly into

executable files, similar to

phonegap or cordova? Or is it only

possible to build the app and then

deploy it on our mobile devices?

A: Yes, it is possible. The Cocos2D-

X backend/engine is available in

the form of a C++ library called

CocosDenshion.cpp. To build the

CocosDenshion library, you need

to import CocosDenshion into your

project. To use it, you need to

build a cocos2d-x library using

CocosDenshion lib and then

manually build an exe (app) using

that cocos2d-x library. Here is the

link for CocosDenshion library:

Here is the link for a simple

cocos2d-x project example: Q: C# Multiple Parameter Passing I am using a code similar to below in the function setup(int i, int j, string x). when x is a String, x will be passed into the function and it works just fine. However, when i tried to use an ArrayList, x will be passed into the function and be null. I don't know why is that? I want to use multiple parameter passing and return some values, so I used

Q: how to find button Text to Replace in JQuery I am working on my application. I am trying to make a little wierd Feature. I have a big Button there is no text at all. I want to add little text into it. When click that button i want to add that button text at the end of the other button text. now i have hardcoded like `$('.senderButton').button().add("SEND MESSAGE");` it not works. I want to replace the button text with new text. Send Message Save

A: Have a look at the `jQuery.append()`

and.html() methods. Technological developments in poultry breeding for better performance and better feed conversion efficiency. Poultry have been domesticated since early in the neolithic period and have remained one of the dominant meats in the human diet, with various regional variations, partly due to culture and partly to technological factors. The development of the turkey from wild fowl has long been recognized. Wild turkeys tend to feed on native ground covers, but over time have gradually adapted to agricultural feeds. Modern improvements in poultry breeding have been associated with increases in rate of growth and feed conversion efficiency, as well as improved feed utilization and reduced disease susceptibility. A number of genetic parameters have been found to impact growth and performance, including, age of sexual maturity and maximum

rate of growth, feed intake and efficiency, hens' lay rate and egg size, gait and conformation. Most of these traits are complex, and involve interactions with multiple genes.
