Pingeling

* Monitoring and checking status of popular mail, web, ftp, telnet, ssh, http, and pop3 servers. * You can check your server's status either through a web interface, a customizable email with name and message attachment, a telnet interface, or by sending SMS messages. * Pingeling is a simple text based monitoring tool. You can use Pingeling either as a drop-in replacement of your favorite mail/web/telnet/ftp monitoring tool or as a replacement for your (email) email client. [![Screenshots]([![Build Status]([![GitHub Actions](# Features * Perform speed tests to check a servers bandwidth and connection speed * Check mail and web servers * Check Telnet and SSH servers * Check from www or ftp servers * Email, SMS, Push notifications for server status # Installation 1. Unzip and extract the application (look at the extracted content to find the app and all the examples). 1. Move the folder where the app is located to `/usr/bin`. # Desktop Usage ## Install 1. Open `Pingeling` folder. 1. Type `pingeling -h` in a terminal window. 1. Enter the following: * **Format**: `Email_name@email.com - [Unique_identifier_of_server]` * **Title**: `Server name` 1. Select `Sms` or `Email` in the Status format. 1. Choose `OK` to save. 1. Now you can try a server

Pingeling Crack License Key Full PC/Windows

=========== Application written in x86 assembler, with C/C++ based Python wrapper. Should work on almost any Linux or OSX. The source code is available under the GPL. Pingeling has been developed on RaspBerry Pi and run on FreeBSD, Ubuntu, Gentoo and Debian. Application security, installation and best practices are documented on the application website. The application has been used in over 80 installations across the world, and has been downloaded and used by over 10 000 users. Donations, donations, donations, and more donations. Pingeling is available at If you want to show your love for this project, make a small donation (and receive a small reward), or even make a large donation, and get all future versions of the application totally free, as well as other rewards. Please contact me via the email address on the website to receive a personal payment request. Direct donations to: I've used pingelings system to monitor the db server that I'm using to host my system. I've also got a single entry log on the actual machine and I've also configured my mail server to log all email messages into a file. With this setup I have the ability to see what messages are going to my mail server, how many times it was emailed, any failed attempts and even who emailed it. I can also correlate access logs with message logs. It doesn't save me a ton of time but it does allow me to monitor what's going on at any given time. [17:56:10] we have problems [17:57:26] and we are the ones paying [17:58:11] lol [17:58:12] i think that pylons/b3/pyramid are all reusing config that we found from people in the past and we are trying to get people to think about micro-apps more than the monolith [17:58:13] i'm thinking of what we are doing now, which is to maintain an army of servers running every app [17:58:49] 1 for every model [17:58: aa67ecbc25

Pingeling Crack + Keygen Full Version

This easy to use application will help you to monitor servers and services and let you know instantly if any of them will down. It will do all of that without you even having to open a connection, because the program will monitor them for you and notify you in any case. It's different than most other services because you can use it with a mobile phone. No apps, no syncing, no cloud, no data. It's just a sms message sent to your phone. There are three different kinds of configuration. You can choose to have the Sms message sent to your mobile phone automatically, when the server status changes or you can have it notify you by email or by SMS message. You can also choose to have the program keep a backup of the status of the servers and services you specify, so you always can get in touch when you need it. These three parameters are configurable. If you want to have it notify you by email, and save the server list to the local machine, these options can be set in the config. Pingeling Features: - It monitors servers and web pages. - It will notify you by email or SMS message when the server or page is down. - It will keep a backup of the latest server status (for a few days). - It works with mobile phones - It doesn't use Google cloud. - It's entirely free How to use Pingeling: - Go to the Pingeling.com website and sign in. - Choose to enable your mobile phone or to receive an sms message when the server or web page is down. - If you want to save the status of the servers in the local machine (first column), you have to enable this option on the config. If you want to receive a sms message when the server status changes, you have to choose the SMS or Email option on the config. - You can configure the time interval of the monitoring. You can also click on the advanced link to access to a more detailed configuration. Download the latest version of Pingeling from Pingeling.com. With this program you can check both active and passive servers. All web servers, DNS servers, mail servers, ftp servers and others are supported. You can also specify the time interval (minutes) between the checks. The program also allows the user to configure the application to test
