Stochastic Optimal Control of Uncertain Dynamical Systems: A Model-Free Approach. The dynamics of uncertain systems appear in many different contexts, and thus, the study of control systems for this type of systems is a relevant topic. Despite the technical difficulties involved in the computation of optimal control solutions for such systems, there are several methods that allow for finding solutions to control problems of this nature. We focus on a specific and well-known class of stochastic optimal control (SOC) problems: uncertain systems. In this context, we introduce a new model-free method that enables the use of either direct or indirect techniques for obtaining SOC solutions in this context. We combine this model-free method with the well-known continuous approximation method (CAM). We demonstrate the performance of this method for a case study of an uncertain nonlinear oscillator. We show how this method results in solutions to the SOC problem without explicitly solving the system.

electrode material in a lithium ion battery includes, for example, a lithium-containing transition metal  
oxide as a main component. In recent years, an attempt has been made to increase energy density  
by using a nonaqueous solvent other than an aqueous solvent for a nonaqueous electrolyte to be  
used in a lithium ion battery. A proposal to use an organic solvent including an organic solvent in a  
nonaqueous solvent has also been made. In the case where a nonaqueous electrolyte is used, the  
safety in the battery is a problem. In such a situation, an attempt has been made to reduce the risk  
of ignition and explosion by, for example, adding an ignition-type flame retardant to a nonaqueous  
electrolyte. Further, a proposal is made to make a high-potential positive electrode (positive  
electrode active material layer) of a lithium ion battery an active material which is doped with  
lithium and which is represented by LiaCbMdOe where A, B, C, D, and E, respectively represent a  
fluorine atom, a halogen atom, a sulfur atom, a phosphorus atom, and an oxygen atom. See, e.g., JP
