AutoCAD provides two-dimensional drawing, 2D and 3D drafting, and other functions. 2D drawing [edit] The 2D drawing area is divided into a workspace and model space. The 2D drawing area is divided into a workspace and model space, which can be adjusted by various panels. The drawing area has two types of layout: Grid: grids are used for measuring and placement. Grids are the same size, and can be overlapped to make space. Grids are used for measuring and placement. Grids are the same size, and can be overlapped to make space. Layout view: the default view, which includes crosshairs, is not available for every object in every drawing. 2D Drafting [edit] AutoCAD allows you to create and edit various 2D objects, such as rectangles, circles, and lines, and to view, modify, and place them into the drawing. The default workspace contains a drawing area that can be moved, resized, split, and split into pages. The model space can be separated from the drawing area, and can be used to create new objects, such as lines, circles, and text. The model space can also contain other objects, such as layers and blocks. The model space, which can contain any number of objects, is used for 2D drafting. Go to the modal "base" which is where you have to define the name of your project, the path and choose the "model" which you want to upload. And here the main modal "model" will open in where you have to choose the "object" which you want to upload and it has a particular name. The "scale" modal will open where you have to choose the model where you want to include the 3D model and it will include it. The "center" modal will open where you have to choose the center of the 3D model where you want to include it. You have to open "detail" where you have to give the 3D object. Press "OK" and close all the windows. A: Though you already answered this question there is also a full step by step tutorial about how to import 3D models from Blender to Autocad: Open the Autodesk App Go to Modeling Open 3D Studio Max Open Blender 3D Studio Max has an export feature that allows you to export all objects and components from Blender. Start Blender Go to File Then choose Export as.obj Choose the type of the exported file Save it in the location you want Close Blender Open Autocad Go to Drawing Open 3D Drawing Then you have to define what file format should be exported (Autodesk DWG or Autocad 3D PDF). Feedback in your design: Add drawing annotations and highlighted changes, then share with co-workers and clients. (video: 5:15 min.) Save time with easy-to-use tools: Use drag-and-drop to organize CAD drawing data, then apply design changes quickly. Design Constraints: Work within preset boundaries by applying locking on existing or new geometry. Limit drawings to predefined areas, or define exact shapes, areas, or points on the screen. Advanced Dimensioning: Model multi-level architectural spaces or other three-dimensional elements like furniture, machinery, or other physical objects. Then align to a 3D model, share with co-workers, or make your design even more accurate. Better 2D Design: Working in 2D? Design with Precision. Now you can use a single 2D tool to design multiple 3D objects. Speed up drawings with essential tools: Use AutoCAD commands like Zoom In/Out, Snap to, and Annotations to help you design faster. Take advantage of new desktop and mobile apps: AutoCAD 2023 is available as a desktop app, mobile app, and website.Q: What's the best way to store a user's "show preferences" data? What's the best way to store a user's "show preferences" data? I.e., user looks at my app and can chose whether they want to see the current stock values, trend line, trend direction, etc. A: You can't store the preference in a database because of the potential for a huge list of entries. You could add a preference for each stock and a few other bits of information. One way you can do this would be to store a serialised PHP array in the database.
