Q: Transformation of probability density function I have a probability density function that is given by a constant,  $p(t)$ . It does not have a closed form solution; I can calculate it numerically given  $t$ . But I need to determine the transformation of this

---

function. I do not know how to do this. Can you please suggest a method? I am not looking for a closed form solution. A: To find the transformation you need to find the CDF, which is the inverse of the probability density function:

$$F(x) = \int_{-\infty}^x p(y) dy = 1 - \int_x^{\infty} p(y) dy$$

In your case

$$F(x) = 1 - \int_x^{\infty} \frac{1}{1+e^y} dy$$

---

$$F(x) = 1 - e^{-x} + x$$

Group calls on both US and China to support Myanmar's peacemaking BY CAROLINE MILLIET YANGON — An international human rights group called on the United States and China on Thursday to pressure military leaders in Myanmar to find a peaceful solution to the state violence that has engulfed the country in the past three months. In a report, the rights group said

---

ethnic-based fighters  
“appear determined to  
exterminate each other’s  
communities,” adding that  
ethnic divisions are  
deepening and information  
about the conflict is difficult  
to verify. A total of about  
600 people have been  
killed. Since a new  
government was formed in  
May in Myanmar after  
decades of military rule, the  
country’s army has  
launched a brutal campaign

---

against the country's ethnic minority communities in the northwest of the country. In a statement released this week, the United Nations special rapporteur on human rights in Myanmar said that the military had carried out "massive, systematic and widespread" crimes that have included "acute and significant violations of human rights." Aung San Suu Kyi, the de facto leader of the country,

---

has appeared largely  
powerless to influence  
events. In comments to a  
fellow Nobel laureate earlier  
this week, she insisted that  
she could not be blamed for  
the violence, saying that she
