Could not find handler for pre-commit SQL Server transaction log. This is usually because the transaction log is missing or damaged All inserts are done using "catchAll" option in the connection string and also our T-SQL API uses the "UPSERT" option. When we are executing the same command using our API, everything works fine, but when we try running from SQL Server Management Studio, this problem comes up. One more thing to mention is we are using a SQL Server 2005 trial edition and a SQL Server 2008 production edition. Here's the connection string that we are using: USE [MyDB] CREATE DATABASE DEFAULT CHARACTER SET = 'utf8' COLLATE = 'utf8_unicode_ci' GO EXEC master.dbo.sp_addumpdbr CONNECTION=_SCT_DATABASE GO ALTER DATABASE _SCT_DATABASE SET RECOVERY SIMPLE GO CREATE USER [MyDB\Instance] FOR LOGIN _INSTANCE c6a93da74d
