## **HTML Guardian Crack+ Free**

If you own a web site or you need to create one, then you probably need some kind of a tool that will help you to protect your source code and other HTML/JavaScript files. As it may seem, HTML Guardian is exactly what you need to make your job easier and to protect your source code. With this tool you can encrypt the files that you want to make private and password-protect them, so the files can be protected from other users in an unauthorized way. If you will be working with these files over and over again, then they will be much easier to deal with, because they will be much easier to protect. So, if you need to work with different web projects, then it will be much easier for you to keep all your source code under a same encryption. Moreover, you will not have to pay any attention to the fact that you forgot to protect the files that you want to reuse in another project. You will not need to remember which files you want to protect, or you want to keep them secret. Another advantage of using HTML Guardian is the fact that you can encrypt the files that are larger than the predetermined size. So, you will not need to worry that someone will be able to view your source code. In addition, you will not need to worry about the fact that someone will be able to steal your source code from your website, because all the data that will be stored inside the files will be encrypted as well. You can use the program's protection mode and protect your website from being stolen. This way, you will be able to protect your website from any unauthorized user or external devices such as phones and tablets. If you are a webmaster, then you probably need to use the program's batch mode for encoding and protecting your website. Using the batch mode, you can easily protect your entire website or you can protect the files that are inside the website. You will be able to control the encoding process and protect the files that you need to make private. All the encoded files can be password-protected, so you will not have to worry that your source code is protected and your website is safe. Another great feature of the program is the fact that you will be able to create a list of files that need to be protected, so you will not have to remember the files that you want to protect and you will not need to encrypt files that you want to share with other users. Encrypt and save files. Win7 Encrypt Files & Folders - Guard Your Web Files PC Internet Security (PCIS) Encryption Virus Protector Pro - Encrypt Files & Folder Encrypt & Password Protect Files in Outlook HTML Guardian is a lightweight Windows application that features encryption capabilities for helping you encode your HTML pages, so other users cannot steal and reuse your source code in other websites. This tool comes in handy for webmasters who need to encrypt their HTML code and JavaScripts, password-protect their websites or individual files, optimize and compress the source code, as well as protect entire folders, websites, or user-defined file lists in a batch mode with security settings for each item. Rich-featured layout The program offers support for many dedicated parameters, so you need to take some time and experiment with each built-in function for making the most out of this utility. Encryption options and filters HTML Guardian gives you the possibility to select the files and folders that you want to encrypt and apply a wide range of filters, such as filename pattern, size, date, and/or user-defined words. Plus, you are allowed to create multiple filter sets and apply the desired one in your future projects. It works with the following file formats: HTML, JS, VBS, CSS, ASP, INC, SH, and PHP. What's more, it offers support for an image protection mode, and you are allowed to protect pictures bigger than a custom size and disable the browser image cache. What's more, you can test the encrypted data, define a list with files that you need to periodically encrypt for triggering the automation of common encryption tasks, encode entire websites, and protect your files with the aid of a strong algorithm corresponding to a 384 bit key. Last but not least, you can use hotkeys for a better control over the entire process, write command-line parameters, back up all your current settings and restore them, install additional plugins for enhancing the program's functionality, as well as convert web files (e.g. HTML, JS, VBS, TXT, PHP) using the UTF-8 encoding method. Additional security features HTML Guardian comes packed with several powerful tools built to give you a hand when it comes to disable right-click mouse operations, printing, clipboard and Print Screen options, optimize the encrypted source code, encrypt only some parts of the code, clean up your files by removing useless items (
